PROFESSIONAL SUMMARY

Computer Science undergraduate specializing in AI/ML systems, LLM tooling, and full-stack development. Builder of shipped projects spanning AI agent observability, LLM fine-tuning, and production web apps, with published research and a public technical writing portfolio.

TECHNICAL SKILLS

Languages: Python, TypeScript/JavaScript, Java, HTML/CSS, C

AI / ML: TensorFlow, Hugging Face Transformers, Gemini API, OpenAI API, Ollama, OpenCV, Pandas, NumPy

Frontend: React, React Native, Next.js, Tailwind CSS, Vite, Responsive UI Design

Backend & Cloud: REST APIs, Node.js, Flask, Authentication Systems, Vercel, Google Cloud Run

Databases: MongoDB, MySQL

Tools: Git/GitHub, VS Code, PyCharm, Streamlit

KEY PROJECTS

AgentWatch — Real-Time AI Agent Cost & Behavior Monitor | Python

- Built a real-time monitoring tool that tracks token consumption and spend of autonomous AI agents to prevent runaway API costs.
- Designed the observability layer to surface anomalous agent behavior as it happens, rather than after the fact via post-hoc logs.

HalluciScope — Local LLM Hallucination Auditing Tool | Python

- Created a local-first diagnostic tool that detects and scores hallucinations in LLM outputs, enabling developers to audit model reliability without sending data to third-party APIs.

TokenLens — Token Waste & Efficiency Profiler | Python

Developed a profiler that identifies architectural inefficiencies and wasted token spend across LLM-based workflows, informing cost-optimization decisions.

ChainWatch — Multi-Step AI Decision Integrity Tracker | Python

- Implemented a “flight data recorder” style tracer for multi-agent/multi-step AI pipelines to preserve decision integrity and enable post-incident debugging.

AI-Pulse — Real-Time AI Trends Intelligence Platform | TypeScript, Gemini 2.5 API, Search Integration

- Built a platform that aggregates and summarizes real-time AI industry trends by combining Gemini 2.5 with live search grounding.

AyurAllopathy Doctor — Fine-Tuned Medical Guidance LLM | Llama 3 8B, LoRA, Hugging Face Spaces

Fine-tuned Llama 3 8B using LoRA to build a domain-specific assistant blending Ayurvedic and allopathic medical guidance; deployed as a live Hugging Face Space.

Also fine-tuned a compact Gemma 3 4B variant, exploring trade-offs between model size and domain accuracy.

PUBLICATION

Book Chapter Contributor — “Metaverse and Societal Effects,” IGI Global Scientific Publishing.

- Co-authored a peer-reviewed academic chapter analyzing the societal impact of metaverse technologies, published by IGI Global.

CONTENT CREATION & LEADERSHIP

Founder, Conflux AI — produce technical content on AI, LLMs, and technology trends; explored AI-driven content automation workflows.

- Technical Writer, Medium — published articles on AI/ML developments (e.g., GPT-5, DeepSeek AI, agentic coding workflows) reaching a public developer audience.
- Mentor to 20–30 CSE students — guided peers on AI and cloud learning paths and project direction.

EDUCATION

Bachelor of Technology (B.Tech) — Computer Science & Engineering

GIMT — Global Institute of Management and Technology (Global Knowledge Campus), India | 2027 | CGPA - 7.66
